

Project Realization Manager

Repulping Technology GmbH & Co. KG is a young and growing company from the CleanTech industry with an extensive network of market leaders and global players from the paper and recycling industries as clients.

As an innovation leader, we offer the industry wholesome closed-loop solutions. Thereby, as turn-key providers, we plan and construct entire recycling centres, including all necessary facilities and aggregates, and provide the accompanying services, such as, among other things, pipeline construction, installation, electrics and automation, as well as the necessary water cycles.

We are seeking a Project Realization Manager, who will be able to plan, realize and steer our future plant engineering projects in an optimal manner. In doing so, we would like to standardize the order management processes during the first projects.

Your strengths and experiences:

- You possess sound knowledge in plant engineering and, ideally, operational and technical know-how in construction
- Your acquired competences are rounded up by a university degree in engineering, electronics or automation technology
- You contribute experience in all engineering phases and have experience in construction, construction documentation and logistics processes
- You possess a certification and comprehensive experiences in relation to project management in plant engineering
- You possess process know-how in relation to the development of offer management
- Interest in process technology and plant engineering, in particular for closed-loop products
- Your strength is a professional work method:
 - analytical thinking skills and a systematic work method,
 - business fluent English,
 - proficiency in the fields of IT, business infrastructure and MS Office,
 - excellent self and time management,
 - outstanding written, verbal and client-oriented communication skills,
 - entrepreneurial mindset
 - best work results even under high work load
 - high attention to detail and focus on fact-based decision making

Your duties:

- You accept responsibility for project planning of the construction projects in the project realisation phase
- You plan the mechanical integration of the plants in the existing plant environment together with the Product Management
- You plan the electrical connections and automation technology of the projects

- You take over the steering and order processing of the projects
- You take over the handling of the after-sales business
- You conduct supplier meetings and prepare procurement procedures
- You develop the claim management and order management
- You perform controlling and regularly report on projects

Advantages for you at Repulping Technology:

Together we will create sustainable benefits for the environment, for our team and, last but not least, for our clients. In doing so, you will actively help shape the recycling economy of tomorrow related to flows of fibre-based recyclables already today. We offer you short decision-making processes, an extraordinary flexibility, variable remuneration, team work, home office and many more small and large advantages. The work location is 86551 Aichach or, alternatively, Dresden.

Contact:

We have addressed your pioneering spirit and you would like to help establish new environmental technologies in recycle markets? Then please send your formal application documents with specifications regarding availability and salary expectation to:
